

## OVERVIEW

### Internal Transducer Torque Tester

**DTT-Series.** A high accuracy of 0.2% of full scale ,table top torque tester. It is ideal for small power tools torque testing and tools calibration. Solid construction for a heavy duty working cycle. Large graphic LCD screen with back light and many advance features.

DTT-Series

**DTS-Series.** A very cost effective table top torque tester. Design for general purpose application. Slightly smaller in size and weight than DTT. Accuracy is 0.5% of full scale. Clear large graphic LCD display.

DTS-Series

**DTW-Series.** A cost effective small to very high capacity torque tester. Whether you are testing Electrical tools, Pneumatic tools, Torque screwdriver or Torque wrench, DTW can meet all the features and requirement. Accuracy is 0.5% of reading.

DTW-Series

**DTH-Series.** First handheld torque tester in the industries. A handheld version of DTS tester with same size graphic LCD. Accuracy and features are also same as DTS. Ideal for torque screwdriver, small torque wrench, electric screw-driver and small pneumatic tools. Can be used handheld or on table top for on site or production line with high mobility.

DTH-Series
